

# Pallet Manufacturing

In the Goulburn Valley, Victoria

## 1. NEW PALLETS

K&S Pallets has the capacity to manufacture

- in excess of 2,000 new pallets per day.
- manufacture is on automated machinery to ensure quality and consistency of the finished product.

Our new Pallet Design Software will reduce waste, cost and ensure all pallets meet the design specifications of the client

## What We Can Do! K&S Pallets specialises in

- Local and Export Pallet manufacture.
  - Manufactured in both Pine and Hardwood material
  - Using our own Pallet Design Software application
- We do both chemical and heat treatment to ISPM15 standards
- We manufacture fruit bins .
- We ship to all states and territories in Australia as well as overseas

*We have a 'Can Do Attitude'*

## 2. USED PALLETS

Within our automated pallet making facility we have the ability to repair up to 800 pallets per day to fulfil the market for refurbished products. The repair capability extends the life of the pallet, thereby reducing the pressure to use new forest timber resources

*We have a' Can Do Attitude*

## Export-An Expanding market

With the acquisition of the PDS program and the upgrading of our ISPM15 certification, K&S Pallets are focusing on export markets and have had some success with new export contracts in China.

Other Asian markets are now being examined as well for potential export opportunities.

Australia's sustainable timber resources and K&S Pallets' ability to supply a quality product on time is our advantage in the export market

Our ability to manufacture pallets to export designs, meet all the export certifications and be able to guarantee delivery through our own supply chain puts us in an effective position to meet export orders.

## Pallet Manufacturing in Shepparton- Victoria

Pallets are an integral part of the supply chain, facilitating the transport, storage and distribution of both raw materials and finished goods through to the end user

Pallets are ideal for road transport, container shipping and warehousing

Wooden pallets have many advantages. They are cheap to manufacture, can be repaired, are generally made from sustainable timber forests, can be made in many shapes and styles. They can meet differing export specifications

Recently we acquired a Pallet Design Software (PDS) program that will enable us to design and manufacture any pallet to meet the load, style, size and type of pallet to meet the specifications of the customer.

We are also upgrading our export capability with the acquisition of a drying kiln to achieve both chemical and heat treatment for ISPM15 export certification.

*We have a' Can Do Attitude*

## End to End Supply Chain

We cannot stress enough the importance to K&S pallets of the end to end ownership of the supply chain. We source our raw logs from sustainable forests, managed by SA Forests. We mill these into timber products that we use in the manufacture of pallets.

This control of our raw materials assists us to achieve benefits such as:-

- Quality of the timber produced
- Reduction in waste products not meeting the pallet requirements
- An ability to change the output from the sawmill to meet changing client needs related to the size and design
- A reduction in inventory costs, as we can produce product for the pallet making facility on a 'just in time basis'.
- In reality the whole supply chain can operate more efficiently on a **'just in time basis'**

*We have a 'Can Do Attitude'*

## Warehousing and Cold storage

Further to our 'end to end control' is the ability for K&S Pallets to utilise warehousing facilities owned and operated by the group for cold and dry storage of palletised goods.

Cold storage preserves agricultural products. Refrigerated storage helps in eliminating sprouting, rotting and insect damage. Edible products are generally not stored for more than one year.

Cold storage helps stabilize market prices and evenly distribute goods both on demand basis and time basis. The farmers get the opportunity of producing cash crops to get remunerative prices. The consumers get the supply of perishable commodities with lower fluctuation of prices.

Ammonia compressors are used in our cold storage facility to maintain the temperature in the cool rooms.

The temperature necessary for preservation depends on the storage time required and the type of product and we will do what the customer or product requires to

## **Our Network of Warehouses**

As a group in the Goulburn Valley we currently have over 20,000 sqm of warehouse space available, our head office has up to 1000sqm of cold storage space on site which is accessible.

## **Distribution Nationally**

We offer a freight network with daily shipments to most major cities across Australia and including regional areas.
