MIS

✈️ MANAGEMENT INFORMATION SYSTEM (MIS)

As organizations evolve and grow, they amass huge amounts of data. This data is usually scattered throughout the organization and might be available in different systems and even in various geographical locations, which makes the gathering and analyzing of this valuable asset extremely challenging.

As a result, today's organizations struggle to consolidate their distributed data in one single data source (Single Point of Truth) in order to achieve consistency and integrity in their reports.

TAV TECHNOLOGIES MIS (Management Information System) is a complete data analysis and visualization solution designed to address all these challenges and help organizations to gather, consolidate and analyze their data in order to turn data into information and information into actionable intelligence to guide and support management decisions.

✈️ TAV TECHNOLOGIES MIS features and functions help you analyze organizational data in order to optimize performance and stay competitive within your market;

✈️ Business Benefits

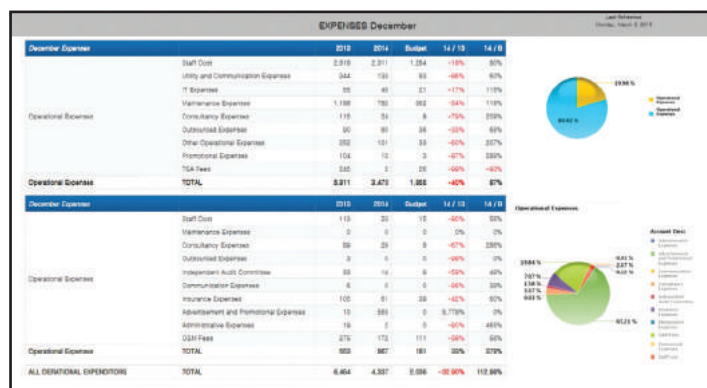

- Visibility of all operational and financial data in one place
- Analyze data and turn it into information to understand your organization better
- Monitor operational and financial performance of your organization in near-time
