## ✈ ENTERPRISE RESOURCE PLANNING (ERP) CONSULTANCY SERVICES

TAV TECHNOLOGIES works closely with business owners to design the “best fit” solution, customized to their specific business needs, and helps them to find an optimal mix of products, technology and resources.

To realize each operational efficiency opportunity, TAV TECHNOLOGIES provides ERP consultancy, development and integration solutions as well as implementation, training and systems support.

Our goal is to assist customers in realizing their capital, operational investment and ERP system potential.

An ERP system is a structured approach to the optimization of a company's internal value chain.

Our mission is to assist our customers in maximizing this value through effective project management, continuous improvement of existing ERP systems, and a commitment to the provision of the highest level of 24/7 Customer Support.

## WHY TAV TECHNOLOGIES ERP?

TAV TECHNOLOGIES integrates your core business processes into one single ERP application and helps you maximize the efficiency of your business processes across the entire organization.

TAV TECHNOLOGIES ERP services consultants do re-engineering on your business processes to support you to increase overall performance of your company. It also decreases the level of data inconsistency among systems.

## ✈ WHAT DOES TAV TECHNOLOGIES DO?

### ✈ ERP SYSTEMS ANALYSIS & EVALUATION

- We help business owners assess their business needs.
- We propose best-fit solutions to enhance business owners' returns on their ERP investments.
- We optimize business processes and technological resources in order to realize process- and control- efficiency targets.

# ERP

## ✈️ ERP SYSTEMS PROJECT MANAGEMENT

- TAV TECHNOLOGIES is a certified partner of Oracle and manages Oracle e-business suite implementation projects.
- Our experience plays an important role in the success of our projects as we work to fulfill our customers' expectations to the greatest extent possible.
- We help organizations to derive maximum value from their ERP investments through customized developments.
- We develop integration infrastructures while providing operational, reporting functionality and technical consultancy services.

## ✈️ ERP SYSTEMS INTEGRATION

- Our team works to re-engineer customer processes and to design an ERP integration structure.
- We're involved in the design and development of the integration between aviation and other operational systems, including ticketing and car park management systems.
- We provide integration ready framework between ERP applications and aviation systems.

## ✈️ ERP APPLICATION TRAINING & SUPPORT

- We provide comprehensive training and support for Oracle e-business suite modules.
- We deliver on-site classes customized to each of our customers' unique needs.
- Our consultants work to combine the product's functionalities with custom solutions.
- Together, these ensure that our customers develop a broader ERP vision.

## ✈️ ERP SOX AND COBIT COMPLIANCE SUPPORT

- We work with business owners and internal audit departments to identify any inherent application's security risks.
- We respond to SOX, COBIT and other control issues, and meet associated reporting requirements.
- We develop customized preventive controls for Oracle applications.
- We deliver templates that ensure the segregation of duties throughout the client company's application systems.
- We satisfy financial compliance requirements while ensuring increased confidence in our client's financial reporting.

## ✈️ CAPABILITY CHECKLIST

- Are your managers able to gather correct and consistent information in order to make the right decisions?
- Are you able to run your business processes at anytime from anywhere in the world?
- Could you make your processes more efficient? Are you aware of the insufficiencies of your processes?
- How do you communicate with your customers and partners in order to improve your services?
- Can you increase productivity by standardizing your processes and running them all from one single application?

## ✈ THE BENEFITS OF INTEGRATED BUSINESS SOLUTIONS

Stand-alone business applications are barriers against productivity. A rapidly growing company can easily get stuck into a rut of inefficient, complex business processes that result in serious mistakes in business execution. The benefits of an integrated business solution are as follows:

- Advanced control of financial compliance requirements and reporting
- Manage your business processes at anytime from anywhere in the world
- Standardize your processes and run them all from one single application
- Expand into new markets easily and have the flexibility to add new modules
- Access to a common data source that is accurate, reliable and consistent
- Reduce unauthorized and unnecessary expenses by streamlining purchasing and procurement processes

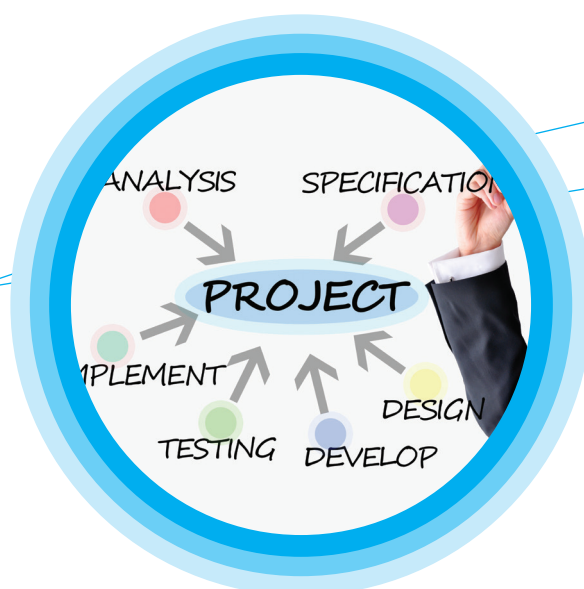

## ✈ TAV TECHNOLOGIES ERP SOLUTIONS

**TAV TECHNOLOGIES Payment Automation Application:** Oracle E-Business Suite specific tool which consolidates the payment transactions of companies from the various Oracle EBS modules depending on the business rules and creates a PDF file both with summary and detailed information of the daily payments.

**TAV TECHNOLOGIES E-Ledger:** Oracle E-Business Suite specific and government integrated application, which enables electronic creation, safe keeping and sub missal of books to be kept as per the Tax Procedural Laws.

**TAV TECHNOLOGIES E-Archive:** Oracle E-Business Suite specific and government integrated application, which allows issuing the invoice which is required to be issued, kept and submitted on paper as per Tax Procedural Law; to be issued on electronic environment and second copy to be kept and submitted on electronic environment pursuant to the conditions.

**TAV TECHNOLOGIES Expense Management:** Custom module for using Oracle EBS companies. Dramatically reduce the amount of time and effort required to submit, approve, process and pay expense reports. Approvals are handled automatically using Oracle Workflow and Approvals Management. It includes administration utilities for expense policies and expense items can be setup dynamically.
